## Innovative Spin on RF – Taking your RF Screens to the Next Level

All JDA/ Blue Yonder (BY) WMS implementations need an RF Solution – a solution for the physical devices that are used on the floor to perform most of the warehouse functions. Smart IS's RF++ application provides several enhancements for your existing RF screens.

We provide an Android app that builds on top of the standard JDA/ BY solution, thus providing support for delivered, as well as custom RF screens without any extra work.

### Features

- **Easy to connect** – Simplify the administrative aspect like adding new devices.
- **Touch Support** – Easy for screen interaction with more options.
- **Screen Layout** – Utilize additional space if available and provide multi-tab options.
- **Additional Information** – Contextual information can be made available.
- **Voice Support** – Natively support the voice capability of the device if available.
- Simplified deployment architecture for the enterprise.
- Out-of-box compatibility with device level extensions like Camera and other sensors.

# Value Proposition

- Builds on Existing BY Solution.
- Additional information can be integrated.
- Eases System Support.
- Reduces the Need for Developers.
- Improved User Experience.
- Adds Contextual Information.
- Screen Layout Enhancements and Touch Support.
- Simplified system interaction by simplifying access to the function keys.
