SMART VIU

Data Anywhere, Anytime

Smart Viu tackles the challenge of meeting user demands for data in BY-WMS by offering a single deployable object capable of displaying multiple data outputs. This eliminates the need to create numerous custom Page Builder screens, streamlines development, and reduces change management complexities.

With Smart Viu, organizations can develop various data layouts without adding new screens. Smart Viu supports Master/Detail layouts and can perform actions on selected data. It effectively eliminates the need for new screen development.

Features

- → Offers one-screen deployment for displaying any dataset.
- → Enables users to configure and perform actions on selected data.
- → Provides a multi-tab layout to render data as Master/Child.
- → Can render data as charts.
- → Provides built-in security layer for controlling data access based on user privileges.

SMART IS

Eliminates the need for new screen development.

Supports color-coded grid based on user-driven rules.

Provides visually engaging charts.
